SUBJECT INDEX TO VOLUME 6

A

- Adenosine deaminase activity,
during growth cycle of T
and B lymphoid cell lines,
483-487
- Affinity binding, in the E-
rosette assay, influence
of thymosin on, 423-435
- Age, effect of on tolerance
induction, 239-257
- Agglutinin, identification and
quantitation of solubilized
I blood group substance by
wheat germ agglutinin using
quantitative immunoelec-
trophoresis, 167-181
- Allergic encephalomyelitis
encephalitogenic region for
guinea pigs, 23-31
- hyperacute, a single determi-
nant, 227-237
- Allogeneic platelets, cytotoxic
antibodies to cultured
human lymphoid cells in
polytransfused thrombo-
cytopenic patients, 267-282
- Allogeneic tissues, syngeneic
tumor rejection induced by
immunization with, 547-558
- Amyloid AA, acute phase serum
precursor of, 1-12
- Animal studies. *See under* indi-
vidual animals
- Anti-*p*-azobenzoate antibody,
crystallization of Fab
fragments from, 373-384
- Antibodies
antigen-antibody binding
energies and interfacial
free energies, comparison
between, 341-354
- antilymphocyte antibody, induc-
tion of hapten-specific
cell-mediated immunity in
Rhesus monkeys treated with,
559-566
- cytotoxic, to cultured human
lymphoid cells in polytrans-
fused thrombocytopenic
patients, 267-282
- determination of concentration
of using a stopped flow
turbidimetric technique,
517-535
- hemolytic, effect of concanavalin
A on functional activity of,
283-296
- induced, crystallization of Fab
fragments from, 373-384
- to myelin basic protein; com-
parison between Lewis rats
with experimental allergic
encephalomyelitis and toler-
ant rats, 499-515
- Antibody response, to xenogeneic
red blood cell challenge in
the Japanese quail, 259-265
- Antigen-antibody binding energies,
comparison between, 341-354
- Antigenicity, of sperm in guinea
pigs, 355-371
- Antigens
antibody responses to xenogeneic
red blood cell challenge in
the Japanese quail, 259-265
- immune response against antigen-
containing liposomes,
489-498
- putatively new antigen CSAP
associated with gastro-
intestinal and ovarian neo-
plasia, 411-421
- Vi antigen, development of a

C

- localized hemolysis-in-gel assay for, 149-165
- Antilymphocyte antibody, induction of hapten-specific cell-mediated immunity in Rhesus monkeys treated with, 559-566
- Antiserum, hamster T cell-specific antiserum, induction of in rabbits using hamster brain tissue, 567-576
- "Arming," of macrophages with lymphocytes from mice immunized with tumor tissue, 297-319
- Arthritis, rheumatoid, monoclonal gammopathies in, 577-584
- Autoimmune diseases
- antibody response to myelin basic protein; comparison between Lewis rats with experimental allergic encephalomyelitis and tolerant rats, 499-515
 - encephalitogenic region for guinea pigs, 23-31
 - encephalitogenic regions for the Lewis rat within the myelin basic protein, 13-21
 - hyperacute allergic encephalomyelitis, a single determinant, 227-237

B

- B cells, adenosine deaminase activity during growth cycle of, 483-487
- Binding energy, antigen-antibody binding energies and interfacial free energies, comparison between, 341-354
- Binding specificity, of lectins from *Ulex europaeus* and *Lotus tetragonolobus*, 585-602

- Canine studies, selective transport of an oligomeric IgA into canine saliva, 633-647
- Cell-associated complement components, 111-132
- Chick studies, induction of avian immunological responsiveness following cloacal drinking of immunogen, 195-206
- Complement receptors, 111-132
- Concanavalin A, functional activity of hemolytic antibody, effect of on, 283-296
- CSAp antigen, 411-421
- Cytotoxic antibodies, to cultured human lymphoid cells in polytransfused thrombocytopenic patients, 267-281

D

- Delayed hypersensitivity, macrophage disappearance reaction as an *in vivo* test of in mice, 49-62
- Dog studies. *See* Canine studies

E

- Effector cells, tumor inhibition by effector cells cultured from progressing sarcomas, 617-632
- Electrophoresis, identification and quantitation of solubilized I blood group substance by wheat germ agglutinin using quantitative immunoelectrophoresis, 167-181
- Encephalitogenic region for guinea pigs, 23-31
- for Lewis rat within myelin basic protein, 13-21

Encephalomyelitis

- antibody response to myelin
 - basic protein; comparison between Lewis rats with experimental allergic encephalomyelitis and tolerant rats, 499-515
 - encephalitogenic region for guinea pigs, 23-31
 - encephalitogenic regions for the Lewis rat within the myelin basic protein, 13-21
 - hyperacute allergic, a single determinant, 227-237
- E-rosette assay, affinity binding in, influence of thymosin on, 423-435
- Erythrocytes
- antibody responses to xenogenic red blood cell challenge in the Japanese quail, 259-265
 - rosette formation by human lymphocyte subpopulation with sheep, human, and horse red blood cells, 455-471
- Experimental allergic encephalomyelitis (EAE)
- antibody response to myelin basic protein, 499-515
 - encephalitogenic region for guinea pigs, 23-31
 - encephalitogenic regions for the Lewis rat within the myelin basic protein, 13-21

F

- Fab fragments, crystallization of from an induced antibody, 373-384
- Free energy, antigen-antibody binding energies and interfacial free energy, comparison between, 342-354

G

Guinea pig studies

- sperm antigenicity, 355-371
- tumor inhibition by effector cells cultured from progressing sarcomas, 617-632

H

Hamster studies

- immunoglobulins eluted from hamster SV40 tumors, characterization of, 133-147
 - T cell-specific antiserum, induction of in rabbits using hamster brain tissue, 567-576
- Hemolytic antibody, effect of concanavalin A on functional activity of, 283-296
- Human studies
- adenosine deaminase activity during growth cycle of T and B lymphoid cell lines, 483-487
 - affinity binding in the E-rosette assay, influence of thymosin on, 423-435
 - lymphocyte subpopulations; rosette formation with sheep, human, horse red blood cells, 455-471
 - putatively new antigen (CSAp) associated with gastrointestinal and ovarian neoplasia, 411-421
 - rheumatoid arthritis, monoclonal gammopathies in, 577-584
- Hyperacute allergic encephalomyelitis, a single determinant, 227-237

I

- IgA, selective transport of an oligomeric IgA into canine saliva, 633-642

- IgE, preparation of high-titered rabbit anti-mouse IgE sera, 473-482
- IgM, isolation and identification of the C μ 4-domain of, 33-47
- Immunity, hapten-specific cell-mediated in Rhesus monkeys treated with adsorbent purified antilymphocyte antibody, 599-566
- Immunization, with normal allogeneic tissues, syngeneic tumor rejection induced by, 547-558
- Immuno-electrophoresis, identification and quantitation of solubilized I blood group substance by wheat germ agglutinin using quantitative immuno-electrophoresis, 167-181
- Immunogen, cloacal drinking of by chicks, induction of immunological responsiveness by, 195-206
- Immunoglobulins
 C μ 4-domain of IgM, isolation and identification of, 33-47
 characterization of, eluted from hamster SV40 tumors, 133-147
- Interfacial free energy, antigen-antibody binding energies and; comparison between, 341-354

J

- Japanese quail studies, antibody responses to xenogeneic red blood cell challenge in the Japanese quail, 259-265

L

- Lectins, binding specificities of lectins from *Ulex*

- europaeus* and *Lotus tetragonolobus*, 585-602
- Lewis rat studies, antibody response to myelin basic protein, 499-515
- Liposomes, antigen-containing, immune response against, 489-498
- Lotus tetragonolobus*, binding specificity of lectins from, 585-602
- Lymphocytes
 affinity binding in the E-rosette assay, influence of thymosin on, 423-435
 "arming" of macrophages with lymphocytes from mice immunized with tumor tissue, 297-319
 mitogen-induced proliferation of, effect of serum and serum components on, 395-410
 mitogen responsiveness of, from mice bearing Moloney sarcoma virus, 603-615
 rosette formation by human lymphocyte subpopulations with sheep, human, and horse red blood cells, 455-471
- Lymphocyte transformation, temperature effects on *in vitro*, 63-80
- Lymphoid cells
 adenosine deaminase activity during growth cycle of T and B lymphoid cell lines 483-487
 in cultured human cells in polytransfused thrombocytopenic patients, cytotoxic antibodies to, 267-282

M

- Macrophage disappearance reaction (MDR), as an *in vivo* test of delayed

- hypersensitivity in mice, 49-62
- Macrophages, "arming" of with lymphocytes from mice immunized with tumor tissue, 297-319
- Mitogen-induced proliferation, of murine lymphocytes, effect of serum and serum components on, 395-410
- Mitogen responsiveness, of lymphocytes from mice bearing Moloney sarcoma virus induced tumors, 603-615
- Moloney sarcoma virus, alterations in mitogen responsiveness of lymphocytes from mice bearing, 603-615
- Monkey studies, induction of hapten-specific cell-mediated immunity in Rhesus monkeys treated with adsorbent purified anti-lymphocyte antibody, 559-566
- Monoclonal gammopathies, in rheumatoid arthritis, 577-584
- MOPC 104E, variant of which does not react with dextran B-13553, 385-394
- Mouse studies
"arming" of macrophages with lymphocytes from mice immunized with tumor tissue, 297-319
macrophage disappearance reaction as an *in vivo* test of delayed hypersensitivity in mice, 49-62
mitogen responsiveness of lymphocytes from mice bearing Moloney sarcoma virus induced tumors, 603-615
MOPC 104E, variant of which does not react with dextran B-13553, 385-394
proliferation of murine lymphocytes, effect of serum and serum components on, 395-410
rabbit anti-mouse IgE sera, preparation of, 473-482
syngeneic tumor rejection induced by immunization with normal allogeneic tissues, 547-558
tolerance induction as an index of age-related changes, 239-257
Vi-specific response of nude and normal mice, 149-165
Murine lymphocytes, mitogen-induced proliferation of, effect of serum and serum components on, 395-410
Murine SAA, isolation and structural properties of, 1-12
Myelin basic protein
antibody response to; comparison between Lewis rats with experimental allergic encephalomyelitis and tolerant rats, 499-515
encephalitogenic regions for the Lewis rat within, 13-21
- N
- Neoplasia, putatively new antigen (CSAp) associated with gastrointestinal and ovarian neoplasia, 411-421
- P
- Peripheral blood lymphocytes, affinity binding in the E-rosette assay, influence of thymosin on, 423-435
PFC response, Vi-specific response of nude and normal mice, 149-165
Plasmacytoma MOPC 104E, variant of which does not react with dextran B-13553, 385-394
Proliferation, mitogen-induced, of murine lymphocytes, effect of serum and serum

components on, 395-410

Q

Quail studies, antibody responses to xenogeneic red blood cell challenge in the Japanese quail, 259-265

Quantitative immunoelectrophoresis, identification and quantitation of solubilized I blood group substance by wheat germ agglutinin using, 167-181

immune response against antigen-containing liposomes, 489-498

Rat studies

antibody response to myelin basic protein, 499-515
encephalitogenic regions for the Lewis rat within the myelin basic protein, 13-21
lymphocyte transformation, temperature effects on *in vitro*, 63-80

Receptors, complement receptors and cell associated complement components, 111-132

Red blood cells. *See* Erythrocytes

Rhesus monkey studies, induction of hapten-specific cell-mediated immunity in Rhesus monkeys treated with adsorbent purified antilymphocyte antibody, 559-566

Rheumatoid arthritis, monoclonal gammopathies in, 577-584

Rosettes

affinity binding in the E-rosette assay, influence thymosin on, 423-435
formation of by human lymphocyte subpopulation with sheep, human, and horse red blood cells, 455-471

S

Sarcoma

mitogen responsiveness of lymphocytes from mice bearing Moloney sarcoma virus induced tumors, 603-615
tumor inhibition by effector cells cultured from progressing sarcomas, 617-632

Selective transport, of an oligomeric IgA into canine saliva, 633-642

Solubilized I blood group substance, identification and quantitation of by wheat germ agglutinin using quantitative immunoelectrophoresis, 167-181

Sperm, antigenicity of in guinea pigs, 355-371

Syngeneic tumors, rejection of, induced by immunization with normal allogeneic tissues, 547-558

T

T cells, adenosine deaminase activity during growth cycle of, 483-487

Thymosin, influence of on affinity binding in the E-rosette assay, 423-435

Tolerance induction

effect of tolerogen concentration and duration of exposure on, 183-194

as an index of age-related changes, 239-257
adjuvant, effect on *in vitro* tolerance induction to a thymus-dependent antigen, 183-194
transport, selective, of an oligomeric IgA into canine saliva, 633-642
tumors
 "arming" of macrophages with lymphocytes from mice immunized with tumor tissue, 297-319
immunoglobulins eluted from hamster SV40 tumors, characterization of, 133-147
inhibition by effector cells cultured from progressing sarcomas, 617-632
mitogen responsiveness of lymphocytes from mice bearing Moloney sarcoma virus induced tumors, 603-615
putatively new antigen (CSAp) associated with gastrointestinal and ovarian neoplasia, 411-421
syngeneic tumor rejection induced by immunization with normal allogeneic tissues, 547-558

Turbidimetry, antibody concentration, determination of using a stopped-flow turbidimetric technique, 517-535

U

Ulex europaeus, binding specificity of lectins from, 585-602

V

Vi antigens, localized hemolysis-in-gel assay for, 149-165

W

Wheat germ agglutinin, identification and quantitation of solubilized blood group substance by using quantitative immunoelectrophoresis, 167-181

X

Xenogeneic red blood cell challenge, in the Japanese quail, antibody responses to, 259-265

HANDBOOK OF Radioimmunoassay

edited by
GUY E. ABRAHAM, M.D.
U.C.L.A. School of Medicine
Torrance, California

March, 1977
832 pages, illustrated

(Clinical and Biochemical Analysis
Series, Volume 5)

- This is the only available book to give extensive coverage—in separate chapters—to statistical evaluation of radioimmunoassay, instrumentation, and radiation safety in the performance of radioimmunoassay.
- *Handbook of Radioimmunoassay* provides clear, detailed descriptions of ways to set up radioimmunoassay procedures for a variety of polypeptides and low-molecular weight compounds.
- Geared toward enabling the relatively inexperienced radioimmunoassayist to set up assay systems with a minimum of difficulty, *Handbook of Radioimmunoassay* is of value to medical technologists, lab technicians, lab supervisors, clinicians, and researchers in experimental medicine and commercial laboratories.

CONTENTS: Generalities. Radiation Safety in the Performance of Radioimmunoassay, *J. W. Patrick*. Instrumentation in Radioimmunoassay, *M. M. Lubran*. Theoretical Aspects of Radioimmunoassay, *W. H. C. Walker*. Immunochemical Assays, *P. M. Keane*. Immunoradiometric Assay (IRMA) and Two-site IRMA Systems (Assay of Soluble Antigens Using Labeled Antibodies), *L. E. M. Miles*. **Hormonal Polypeptides.** Radioimmunoassay for Human Prolactin, *L. Aubert*. Radioimmunoassay of Oxytocin, *T. Chard*. Radioimmunoassay of Relaxin, *G. D. Bryant*. Radioimmunoassay of Insulin, *M. A. Wilson and L. E. M. Miles*. Radioimmunoassay of Glucagon, *L. E. M. Miles*. Radioimmunoassay of Corticotropin (ACTH), *R. A. Donald*. Measurement of Human Calcitonin by Affinity Chromatography and Radioimmunoassay, *D. R. Wright, E. F. Voelkel, A. H. Tashjian, Jr.* Parathyroid Hormone, *G. N. Hendy and J. L. H. O'Riordan*. Radioimmunoassay of Secretin, *J. Hansky and C. Soveny*. Radioimmunoassay of Secretin, *D. J. Byrnes*. Bradykinin, *C. E. O'Day and T. L. Goodfriend*. Angiotensins and Renin, *T. L. Goodfriend and D. L. Ball*. **Nonhormonal Polypeptides.** Radioimmunoassay of Collagenase, *E. A. Bauer, A. Z. Eisen, and J. J. Jeffrey*. Radioimmunoassay of α -Fetoprotein, *E. Ruoslahti and M. Seppälä*. Radioimmunoassay of the Rheumatoid Factors, *D. Focan-Henrard and J. H. R. Schimont*. **Low Molecular Weight Compounds.** Radioimmunoassay of Steroids, *G. E. Abraham, F. S. Limos, and R. Garza*. Radioimmunoassay of Prostaglandins, *K. T. Kirton*. Radioimmunoassay of Iodothyrones, *I. J. Chopra*. Radioimmunoassay of the Iodotyrosines, *J. C. Nelson and J. E. Lewis*. Radioimmunoassay of Antibiotics, *J. E. Lewis and J. C. Nelson*. Folate, *M. daCosta and S. P. Rothenberg*.

The Lymphocyte

Structure and Function

(complete in 2 parts)

(Immunology Series, Volume 5)

edited by

JOHN J. MARCHALONIS

Frederick Cancer Research Center

Frederick, Maryland

August, 1977 352 pages, illus.

Part II

This volume presents a comprehensive description of biological, physical, ultra-structural, and immunologic properties of the varied populations of cells that are collectively termed lymphocytes. The complex sets of phenomena in which lymphocytes participate are discussed, and structural and functional aspects of the cells are examined in detail.

- It is the only book available to collect in one volume viewpoints in lymphocyte biology and physiology as diverse as the application of phylogenetic studies to the origins of lymphoid tissues and physicochemical approaches to molecular events at the lymphocyte surface
- Fundamental topics in cell biology, such as ultrastructural analyses of lymphocytes and their plasma membranes and functions of lipids in the plasma membrane, are included
- New information is examined in such rapidly expanding areas as cell interactions in immune responses, genetics of immune responses, and surface antigens of normal and neoplastic lymphocytes

Written by noted authorities in the field, *The Lymphocyte: Structure and Function* is of paramount interest to immunologists, cell biologists, developmental biologists, membrane biologists and biochemists, physicians, and veterinarians.

CONTENTS (Part II): Biological and Structural Properties of the Lymphocyte Surface. The Lymphocyte Plasma Membrane: Isolation and Properties of Biologically Relevant Proteins, *John J. Marchalonis*. Surface Antigens and Receptors of Normal and Neoplastic Lymphocytes: Nature and Distribution, *Noel Warner and Ian F. C. McKerr*. Use of Lectins as Probes of Lymphocyte Structure and Function, *John D. Stobo*. Ultrastructure of the Lymphocyte Surface, *T. E. Mandel and Vivien B. Santer*. The Surface Coat of Lymphocytes, *Vivien B. Santer*. Dynamic Aspects of the Lymphocyte Surface, *Robert E. Cone*. Structure and Physiologic Role of Lipids in the Lymphocyte Membrane, *Ernst Feber and Klaus Resch*.

INSTRUCTIONS FOR PREPARATION OF MANUSCRIPTS FOR DIRECT REPRODUCTION

IMMUNOLOGICAL COMMUNICATIONS is a bi-monthly journal in the English language for the rapid communication of immunological information.

Directions for Submission to IMMUNOLOGICAL COMMUNICATIONS

One manuscript suitable for direct reproduction (see Instructions for Preparation), carefully inserted in a folder, and two copies of the manuscript must be submitted.

Reprints

Owing to the short production time for articles in this journal it is essential to indicate the number of reprints required upon notification of acceptance of the manuscript. Reprints are available in quantities of 100 and multiples thereof, in addition to the twenty (20) free copies provided to the senior author with orders of 100 or more reprints; a reprint price list will be sent to the senior author with the notification of acceptance of the manuscript.

Manuscripts should be mailed to:

Editorial Office, The Center for Immunology
203 Sherman Hall, School of Medicine
State University of New York at Buffalo
Buffalo, New York 14214

INSTRUCTIONS FOR THE PREPARATION OF MANUSCRIPTS

Since all the contributions are reproduced by direct photography of the manuscripts, the following instructions must be strictly adhered to. Non-compliance will result in the return of the manuscript to the author(s) and delay in its publication.

Typing Instructions

Manuscript must be typewritten, double spaced, on good quality white bond paper measuring at least 8½ x 11 inches.

It is essential to use a black typewriter ribbon in good condition so that a clean and clear impression of the letters is obtained. Erasure marks, smudges, creases, etc., should be avoided. (Errors may be corrected by using white opaque correcting fluids or tapes).

All formulas and equations should be typed in or carefully prepared in permanent black ink, using drawing instruments.

The typing area of page 1, including the title, should be 6¼ by 8½ inches and that of all other pages 6¼ x 9½ inches. Make maximum use of the typing area.

Tables should be typed as part of the text but in such a way as to separate them from the text by a three-line space at both top and bottom of each table. The title "TABLE" (capitalized and followed by a Roman number) should precede the table and be centered on the page. Care should be taken that a table does not overlap onto the next page.

Drawings, graphs and other numbered figures should be drawn in black India ink (do not use blue ink) on a separate piece of white paper. Photographs should be glossy prints. Lettering set should be used for all labels on the figures or photographs; a typewriter may be used for labels. Captions for the figures should be

typed (single spaced) on a separate sheet, along the full width of the type page. The indication "FIGURE" should be capitalized and, with the figure's number (in Arabic numerals), centered above the caption. The numbers of the figures or photographs as well as the name(s) of the author(s) should be written in blue pencil on the back; the top of the picture should also be indicated on the back. The author(s) should indicate (with a blue pencil) the places in the text where the picture(s) should be inserted.

- References (including footnotes) in the text will be numbered consecutively by numbers in parentheses. The full references (and footnotes) will be collected at the end of the text. The last names of all authors to any one paper, followed by their initials, shall be quoted. The title of the journal (Chemical Abstracts abbreviations), the volume number (underlined), the first page and the year should follow, in that order. Books should be cited similarly and include the publisher's name and location along with the year and edition of the book. Articles or chapters in books should be cited similarly and include the name of the editor(s) of the book and the page on which the article begins, as well as the volume number.

(journal): Thrasher, S. G., Doroszczak, N. and Cohen, S., J. Immun., 107:1394, 1971.

(book): Pressman, D. and Grossberg, A. L., The Structural Basis of Antibody Specificity. W. A. Benjamin, Inc., New York, 1968.

(article in a book): Milgrom, F., in International Convocation on Immunology, edited by N. R. Rose and F. Milgrom, p. 270, S. Karger, New York, 1969.

Format of Manuscripts

- The entire title should be in capital letters and centered on the width of the typing area, at least two inches from the top of the page. This is followed by a one-line space and then by the name(s) and address(es) of the author(s), in the following way:

AUTOIMMUNE RESPONSES TO
THYROGLOBULIN IN THE RAT

T. J. Atkins and H. Z. Ginsberg
Departments of Microbiology and Pathology,
School of Medicine, State University of New York
at Buffalo, Buffalo, New York 14214

- The title and the name and address of the author(s) are followed, after a three-line space, by an abstract, comprising less than 10% of the length of the text of the article. The abstract must be typed single-spaced and headed "Abstract".
- After a three-line space, the article itself commences, whenever possible subdivided into sections such as "Materials and Methods," "Results," "Discussion," "Acknowledgments" and "References." The headings should be centered, underlined, and separated by one extra line space from the typed material that precedes and follows it.
- Each page of manuscript should be numbered lightly at the bottom of the sheet, with a blue pencil.

Protection against Syngeneic Tumor Grafts Induced by Innoculation with Normal Allogeneic Tissues	547
<i>R. H. Bear, Jr., O. A. Roholt, and D. Pressman</i>	
Induction of Hapten-Specific Cell-Mediated Immunity in Rhesus Monkeys Treated with Adsorbent Purified Antilymphocyte Antibody	559
<i>B. J. Wilson, G. Leo, and A. Malley</i>	
Induction of Hamster T Cell-Specific Antiserum in Rabbits Using Hamster Brain Tissue	567
<i>J. W. Blasecki, G. M. Butchko, and K. J. Houston</i>	
Monoclonal Gammopathies in Rheumatoid Arthritis	577
<i>G. Wozniczko-Orlowska and Z. Swierczynska</i>	
A Comparison of the Binding Specificities of Lectins from <i>Ulex europaeus</i> and <i>Lotus tetragonolobus</i>	585
<i>H. J. Allen, E. A. Z. Johnson, and K. L. Matta</i>	
Alterations in the Mitogen Responsiveness of Lymphocytes from Mice Bearing Moloney Sarcoma Virus Induced Tumors	603
<i>G. D. Marshall, Jr., G. B. Thurman, B. G. Foster, and A. L. Goldstein</i>	
Tumor Inhibition by Effector Cells Cultured from Progressing Sarcomas	617
<i>I. Berczi and A. H. Sehon</i>	
Selective Transport of an Oligomeric IgA into Canine Saliva	633
<i>P. C. Montgomery, S. A. Khaleel, J. Goudswaard, and G. Virella</i>	
Erratum	643
